COOP

The 12 Words from HELL

When users forget their *password* in their crypto wallets they must remember 12 words in a sequential order to be able to recover them.
This method offers very good security but can create problems in any person who has a disorder that impairs the ability to read and write fluently.

(Dyslexia-Dysgraphia-Visual Processing Disorder-Auditory Processing Disorder Sensory Processing Disorder -Autism Spectrum Disorder (ASD) – Aphasia)

Caveman's Language

In an increasingly visually driven world,
the global financial services
continues to follow
the same codes of past eras.

Lifestyle Stimuli

We generated a simple system for password recovery that **instead of words uses images** that relate to the user's lifestyle so that they can be remembered easily.
